**Turtle Hatchery** - The main aim of the project is to monitor local sea turtle activity and conserve the local nesting sites. We aim to make the public more aware of how endangered these beautiful creatures are and just how important it is to help protect them. The hatchery program is designed to maximize the number of hatchlings reaching the sea and surviving through the critical stages of their early life. The estuary of the Madu Ganga river is a complex coastal ecosystem of mangroves and islands. It may be one of the last remaining tracts of pristine mangrove forests in Sri Lanka. A boat trip is a wonderful way of seeing some of the hundreds of species of plants and animals.
