Euro Servo series

TOGGLE CLAMPING
INJECTION MOULDING MACHINE

DESIGN ADVANTAGES & FEATURES

Clamping Unit

- Wide tie bar distance & daylight
- Robust five point vertical toggle clamp mechanism
- Five stage clamping speed & pressure
- Linear position transducer for accurate clamp position control
- Auto mould height adjustment for quick mould change
- Low pressure precise mould protection
- Tripple safety control of mechanical, electrical & hydraulic devices to ensure operator safety
- Automatic centralised lubrication system with motorized pump

Injection Unit

- Nitrided screw & barrel, wear resistant screw tip assembly
- Three option screw dia available for customer choice
- Five stage injection speed & pressure control
- Variable back pressure control
- Linear position transducer for accurate injection position control
- Screw driven by high torque radial piston motor
- Injection decompression before/after refilling or both
- Aluminum checkered plate below purge area

Ejector

- Knockout bar
- Two stage speed with soft eject
- Ejector stay forward & forward dwell time

Hydraulics

- Energy efficient servo driven gear pump with closed loop pressure transducer feedback
- Separate manifolds for injection unit and clamping unit
- All hydraulics seals are as per ISO Standards
- Oil temperature indication with alarm
- Return line & suction filter provided to clean the oil
- Ergonomic hydraulics layout for easy approach & easy for maintenance

Temperature control

- Actual temperature display of heating zone with colour change effect.
- Thermocouple failure detection
- Accurate PID temperature control setting on screen
- Auto heat start up & shut down program
- High/low temperature alarm
- Set & actual temperature data with graphical display
- Soak timer for cold start protection

Controls

- 10.2" vertical TFT colour display with alpha numeric keypad
- Actual injection speed & pressure with graphical display
- Configure different level of password for different users
- Easily programmable & user friendly
- USB port provided to copy data or production report
- Ethernet connection port for internet connectivity
- Timer precision with 0.01second
- Alarm history provide to recall the fault analysis
- Visual & Audible alarm
- I/O diagnosis for analog & digital
- Mould data storage

Optional Features

- Air ejector
- Hydraulics core pull
- Un screw feature for electric motor
- Water manifold
- Robot interface
- Bimetallic screw & barrel

Euro Servo series

TOGGLE CLAMPING
INJECTION MOULDING MACHINE
