

WUXI FUHONG SPECIAL STEEL CO.,LTD.
Luoshe, Wuxi, Jaingsu, Wuxi - 214187, Jiangsu, China

High Speed Steel

Wuxi Fuhong Special Steel Co.,Ltd. is a major **manufacturer, supplier & exporter** of **High Speed Steel** that show good mechanical & physical properties. It is widely used for making tools / high precision tools, and other allied applications. High hardness and excellent toughness make our steels a perfect selection. Under this category, we offer **High-Speed Steel Rods, HSS Steel Bright Bars, Steel Round Bar**, and more. They find some core applications like machine tool bits, cutting tools & cold forming tools. Our High Speed Steels have high toughness coupled with excellent cutting power. They can withstand higher temperatures without losing temper.

Features & Advantages:

- Excellent Tensile Strength
- Good Yield Quality
- High Wear Resistance
- Optimal Strength & Good Abrasion Resistance
- High Hardness - Excellent Red Hardness & High Temperature Hardness
- ASTM / DIN Standards

Tool Steel

As a key **manufacturer, exporter & supplier** Wuxi Fuhong Special Steel Co.,Ltd. offers a variety of **Tool Steel**, which is excellent in hardness, tensile strength and yield point. High chromium and high carbon type cold work tool steel, this has higher toughness and strength. With excellent mechanical and physical properties, this steel gives good comprehensive performance in various applications. It is used for making drill sets, cold cutting blade, gauge, stamping die, drawing die, cutting die, thread rolling plate, etc. Our **Cold Work Tool Steel, D2 Tool Steel**, etc. have AISI D2 / DIN standards.

Features & Advantages:

- Ensure high wear resistance
- Good harden-ability
- Excellent resistance to abrasion & deformation
- Ability to hold a cutting-edge at very high temperatures

Engineering Steel

Wuxi Fuhong Special Steel Co.,Ltd. is a well-known **manufacturer, exporter & supplier** of **Engineering Steel** that meets the demands of many engineering applications. This high-strength steel has good as well as comprehensive mechanical properties. Under this range we offer **Rolled Steel Round Bars, Forged Steel Round Bars**, etc. These are known for toughness and ability of creating high strength in heat treated conditions, while retaining effective fatigue strength. Our Engineering Steel range is used in mechanical and automotive engineering applications. It meets critical and stringent levels of strength, elasticity, toughness ductility and fatigue resistance.

Features & Advantages:

- Optimum Strength & Toughness
- Din Standards
- Give Lighter Weight Parts That Are Strong
