

PERMAFLOOR
BY FOGAZZA
DURABLE PERMEABLE FLOORINGS

Permaflood is the new brand of Fogazza Pavimenti. Permaflood is specialized in the production of outdoor flooring highly resistant, draining and high aesthetic value.

Thanks to Permaflood new system it is possible to create a floor from different forms and variegated colors.

Fogazza Pavimenti has been active for over a hundred years in the building sector and for the production of marble chips and cement wall and floor tiles.

Permeable and drainage

Permaflood main feature is his permeable and draining effect, the particular composition of Permaflood allows to the water to flow naturally in the soil, avoiding the stagnation of water on the surface.

Permaflood kit is composed of two parts which have a binding function, and a third one consisting of marble grains, stone pebbles or glass marbles of various shapes, sizes and colors. These 3 elements give rise to Permaflood, a type of flooring that goes well with every type of environment, even those with a strong naturalistic and landscape vocation.

Our floors are customizable by changing the third component of the kit. In this way it will be possible to obtain different aesthetic effects depending on the environment in which you are creating the flooring, marble grains to give a touch of elegance, the stone pebbles to give a rustic look or glass marbles for a more modern and scenographic environment.

Permeabile e drenante

La caratteristica principale di Permaflood è l'effetto permeabile e drenante, la particolare composizione di Permaflood permette all'acqua di confluire naturalmente nel terreno evitando il ristagno di acqua in superficie.
