ABOUT US

Background:

Hospitime is a specialised service provider in the Medico Surgical Field for more than six decades always intending to be a company that values Quality, Service and Commitment. Hospitime over its decades of operation has earned reputation as a quality manufacturer of Surgical Instruments and Tools. The company has been successfully servicing large number of Hospitals and Institutions in India and abroad with its manufactured products. Hospitime has also supplied surgical instruments and kits to various pilot programmes to NGO’s, Govt. Institutions and Hospitals across India.

Dedication to Quality:

We employ the highest quality of raw materials. Hospitime is an ISO 9001:2008 certified company and all its products are CE compliance. This guarantee that our instruments are safe and fit for their intended use.

We owe our success to our prestigious customers who have maintained their trust in our products, over the years.

“Quality is our culture”

OUR CERTIFICATIONS
Did you know that ...?

- Metzenbaum scissors (as shown on Pg no. 05) are named after the American surgeon, Dr. Myron Firth Metzenbaum who designed the scissor to cut delicate tissues.

- Lister bandage scissors (Pg no. 05) were invented by a British Surgeon Dr. Joseph Lister.

- Tungsten carbide or TC forceps and scissors (as shown on Pg no. 24) generally provide precise cut and long lasting grip than those without TC. They usually recognized by their gold-plated ring handles.

- Needle holder (Pg No. 09) and Hegar’s dilator (Pg no.) both were developed by German gynecologist Alfred Hegar.

- Rongeurs are also called bone biters or bone nibblers, as their main function is to cut or remove small pieces of tissue or bone. Double action rongeurs provide much more power than single action, causing less hand fatigue.

- The primary use of a hemostat is to clamp and hold blood vesels so that the patient does not bleed to death.

Clean and lubricate the brand new Hospitime instruments before the first sterilization. After use, distinct, clean, lubricate and sterilize the instruments as soon as possible.

Disinfect chemothermally, thermally or by immersing into a combined disinfecting & cleaning solution. Delicate instruments can be cleaned by ultrasonic treatment.

Rinse thoroughly and carefully after cleaning if possible, use demineralized water. Dry sufficiently after rinsing.

Treat the instruments with joints, ratchets or threads with lubricating agent based on paraffin oil. We strongly recommend to follow the sterilization instructions of the manufacturer.

Prior to sterilization, only close the first ratchet on the instruments. Normally, autoclaving is performed with saturated water stream at 134°C.

When instruments are hot-air sterilized, the temperature should be between 180°C and 200°C. Corroded instruments should be discarded immediately.
