

KLUDI Fittings for the bathroom

● KLUDI ●

KLUDI fittings – quality of life every day

Fittings accompany us throughout our daily routines. We come into contact with them all the time in the bathroom and kitchen. This gives rise to certain wishes and expectations for form and function. KLUDI understands these requirements – and implements them in products that are perfectly finished and that combine timeless design, innovative technology and superior-quality materials. This is how we create mixers and showers that are more than just regulated water conductors – they represent a certain quality of life.

We also set store by this closeness to people in our company. In numerous countries throughout the world, KLUDI's employees take personal care of requests from our customers and partners. They know: they can rely on KLUDI – and can expect a lot more in future.

As a manufacturer of fittings, we are conscious of our responsibility to be more economical in our use of water. Environmentally friendly production methods and smart use of resources are therefore a long-term obligation for us. With KLUDI Eco, we implement this promise with products that save water – for the future of our planet.

Using water when you actually need it

The use of water in the bathroom – for washing, showering or bathing – is an emotional experience in every respect. Mixers and showers in many forms and designs ensure that people can devote themselves fully to the bathroom experience with the precious resource of water.

Developments in modern living are mirrored in the key role played by bathrooms today. One of the factors driving the bathroom revolution was increasing affluence, though a more important one has been a change in outlook. Back in the 1960s, bathrooms and kitchens were still functional rooms. Over the years they have evolved into living spaces that reflect a new understanding of quality of life. At social level, the bathroom has been transformed from a place for personal hygiene to a place for personal care.

If you ask people what their priorities are in temporary accommodation – at a hotel for example – they'll always say a good bed.

But the bathroom is where points are scored because however much or little time you spend in there, these moments are some of the most precious of the day when we get to be alone.

Modern mixers are sophisticated bathroom fittings that offer genuine convenience. Over the years, different types of mixers have been developed in different functional designs. Individual preferences mainly determine which types of mixers are installed in which bathrooms. But there are also good reasons why some types of mixers have become accepted as the norm for certain applications.

Professionally designed bathroom fittings

KLUDI's bathroom mixers can do more and offer more – because that's KLUDI's area of expertise. It's the details that put these mixers in a class of their own – details such as choice of material, finish, function, design and innovative features.

Sensor mixers

Sensor-operated mixers are typically used for washbasins. They incorporate infrared technology for contactless activation and are specially designed for hygiene-sensitive applications. They were originally intended for use in public areas, but they're also an excellent choice for guest bathrooms or frequently used private bathrooms. The contactless design also makes them very easy to clean because there is no need to turn them off with wet hands. Typical application: washbasins.

Single-lever mixers

Single-lever mixers permit the fast selection of temperature and flow with one single operating element and one hand. The other hand is free to check whether the water temperature is right. Typical applications for single-lever mixers: washbasins, showers and baths.

Two-handle mixers

Two-handle mixers have separate valves for cold and hot water. These mixers are popular on account of their characteristic retro look and because they offer definite advantages in certain situations. For instance, you can run a bath with hot water only and minimum heat loss – and then top it up with cold water. Typical applications: retro bathrooms, baths, washbasins.

Thermostat mixers

Thermostat mixers deliver maximum convenience because the temperature is preselected according to a scale. This means that the water coming out of the mixers is at exactly the right temperature. There is no need for electricity to operate the thermostat thanks to a special thermostatic element, so the mixer always operates reliably. The mechanism then automatically compensates for any variations in supply temperature to maintain the pre-selected temperature without the user even noticing. Thermostats have a thermal shock preventer that has to be deliberately overridden to avoid discharge of dangerously hot water. This is an important safety feature for households with children. Typical applications: showers.

Concealed mixers with the KLUDI FLEXX.BOX

Concealed mixers have their basic mixer body – i.e. the functional elements of the mixer – installed inside the wall with the operating elements mounted outside. They are an aesthetic and exclusive architectural feature. The KLUDI FLEXX.BOX ensures that this type of mixer is very reliable to use, even though the technology is inside the wall. Once you've installed a FLEXX.BOX, you can subsequently modify the function and design of your mixer. For instance, you can switch from a single-lever mixer to a thermostat mixer or choose a different design series. Typical applications: showers and baths.

s-pointer

There are very many washbasins on the market, and just as many mixers that don't automatically fit the washbasins. So how can you make sure that the mixer directs the water flow to the part of the washbasin where it splashes least? KLUDI makes it easy because the s-pointer directs the water flow to wherever you want it to go. Once the mixer has been installed, simply adjust the flow direction by pushing the s-pointer with your finger!

VersatilityPlus

Many people don't just use the washbasin for washing their hands, which is why many of KLUDI's mixers allow them to do more. The large-radius spouts and wide range of heights and spout designs in the VersatilityPlus range make it easy to fill watering cans, buckets or vases and convenient to wash your hair in the washbasin.

ECO functions

There are two very good reasons for using water more sparingly. It's our most vital resource and a significant amount of energy is consumed in heating it. KLUDI's ECO flow directors reduce the amount of water used by its mixers without compromising on convenience. Aeration ensures a full flow pattern even though the water flow is actually reduced by up to 40 per cent.

Some KLUDI single-lever mixers have the EcoPlus function. They deliver cold water in the centre position, which is generally all you need for washing hands, so it saves the energy you'd otherwise use to produce hot water.

23 carat

Material, finishes and colours

KLUDI mixers are made exclusively of brass, so they satisfy even the most stringent requirements of the German Drinking Water Ordinance. As a result, drinking water from KLUDI mixer is absolutely harmless to health. Every KLUDI mixer is permanently surface treated for a long life in the bathroom.

KLUDI ADLON

The fascination of luxury

Superior details and a gold alloy 23 carat that enhance the refined finish are what make KLUDI ADLON so prized. Richly ornamented and skilfully crafted, this splendid range keeps the turn-of-the-century charm. Nostalgic flair is combined with modern fitting technology.

Craftsmanship skills

Classic, cross-head handles, porcelain inlays and spouts with elaborate, hexagonal faceting reflect supreme craftsmanship. KLUDI ADLON is well entitled to its prestigious name. Elegance that satisfies exacting standards, which can be shown to advantage as much in stylish art deco villas as in a skilful mix of styles in smart new buildings.

JOOP!

Opulence for the bathroom

Emotional. Opulent. JOOP!

The elegant KLUDI mixer and accessories were designed in collaboration with JOOP!, the internationally renowned designer label – bringing glamour to the bathroom.

A touch of luxury – and for me alone

JOOP! in bathrooms equates to personal luxury. And it is plain to see with this mixer. You have the choice of using a chrome-plated lever or a cylindrical handle made of fine crystal glass to operate KLUDI's classic. JOOP! is defined first and foremost by the wide spout, which via, a special aerator, produces a soft stream of water that pleases the senses. There is now a matching mixer for washbasins with a narrower spout and concealed flow director.

KLUDI NEW WAVES

Crisp purist lines

KLUDI NEW WAVES focusses on the essential: the geometric form. Two cylinders, at a dynamic angle to each other, characterise the purist design of the range.

Reduction as a design principle

KLUDI NEW WAVES demonstrates purism with a dynamic feature. The handles are incorporated into the basic form – and are identical in shape in all mixers. The shower continues this use of crisp lines. KLUDI NEW WAVES sets a striking example of fine design.

KLUDI AMBA

The gentle beauty

She's a real beauty: KLUDI AMBA. Sleek, harmonious contours are combined with smooth, rounded surfaces. The flow of water is wonderfully gentle; every touch becomes a sensory experience. Never before has there been a fitting that radiated such emotional qualities.

KLUDI's unique IntegralDesign

KLUDI AMBA looks like it is cast in one piece, as the operating mechanism is an integral part of the homogeneous whole. The discreet red and blue marking is a sure sign: at times this part of the mixer body acts as a handle to regulate the flow of water and temperature. It only becomes obvious when this function is used, then it blends back into the overall form.

KLUDI's novel IntegralDesign is what makes KLUDI AMBA unique. It gives rise to a sculptural appearance that gratifies the senses, such as has never been achieved before so consistently. KLUDI AMBA takes fitting design to a new level.

Intuitive, natural operation

KLUDI AMBA is intuitive to operate, by following the natural line of movement towards the mixer and gently opening up the top of the mixer towards the back. A light touch is enough to start the water flowing. Temperature is regulated with a simple, practised turn. As usual, it can be finely adjusted with pinpoint accuracy.

2013

Graceful drainage fittings

Instead of the entire connecting rod, only the elegant pull knob is visible for the drainage fitting of the KLUDI AMBA mono basin mixer. It butts against the mixer body. As an alternative to a drainage fitting, KLUDI AMBA also provides a push-open valve in the washbasin.

Finely adjusted with pinpoint accuracy

As usual, the flow of water and temperature are easy to adjust with pinpoint accuracy. Proven cartridge technology is used for the fine adjustment, which is also integrated into KLUDI AMBA.

Discreet marking

The red and blue marking blends discreetly into KLUDI AMBA's overall design.

Sculptural design for modern lifestyle bathrooms

The bathroom is increasingly becoming a living environment. KLUDI showcases this trend. The free-standing bath and shower single lever mixer fit perfectly into modern lifestyle bathrooms with a free-standing bathtub. Its sculptural design showcases the bathtub as a design object.

There are six different bath filling solutions to choose from: whether wall-mounted or concealed, whether single lever mixer or thermostat - modern wellness oases can be fully equipped with KLUDI AMBA.

single lever shower mixer DN 15

single lever bath and shower mixer DN 15
534450575

Even surfaces in hand-crafted quality

The extensive skills of an experienced taps specialist are needed to produce something as exceptional as the well-proportioned surfaces of the KLUDI AMBA single lever mixers with shower or combined bath and shower function. They are installed flush with the wall. The effect: the clear aesthetic is not disturbed by the usually visible escutcheons. This allows the fitting to become a design object.

The diverter for the shower mode is perfectly integrated into the mixer. It is only noticeable on second glance. The stylish, polished chrome finish is manufactured in a complex process – understated, high-end design in hand-crafted quality.

KLUDI E2

The art of clean lines

A handle that is pleasant to touch each time you turn the water on. An operating element with a uniquely fine appearance. And clean lines that promise hygiene.

Soft edge is the name of the game for this contemporary design: it gives softer forms to mixer bodies and surfaces, rounds corners and edges and thus results in balanced silhouettes.

KLUDI E2 is there to give you a friendly, uncomplicated welcome with a fresh atmosphere – in your new bathroom.

NEW

KLUDI E2

single lever basin mixer DN 15
492970575

concealed two hole wall mounted basin mixer
492450575

The right version always at your fingertips

Lightness lies in the lever of this mixer the operating element is just a few millimetres thick and is an elegant example of how to obtain a precise flow of water.

In terms of practicality there is a variety of spouts too: VersatilityPlus is KLUDI's concept to make planning and using the washbasin area easier. Thanks to different length spouts and four different heights, the series will satisfy the demands of any washbasin area.

Mixers for your home retreat

The mixer shows off its sensory qualities on the bath. The bath represents your retreat within your own four walls – and KLUDI E2 bath mixers set the backdrop for this oasis of relaxation. There are two ways to use the mixer – toggle by pushing/pulling the knob. On the one hand, the high-flow bath filler to run the bath quickly. And on the other, the handset for showering in the bath or rinsing off after washing your hair.

Whether for a free-standing bath or mounted on the wall: The KLUDI E2 bath mixers are also in keeping with the design series, which is classed between pure minimalism and organic form.

concealed thermostatic mixer
497290575

concealed single lever shower mixer
496550575

Emerge from your shower invigorated

The shower stands for vim and vigour – the KLUDI E2 line for this area of the bathroom is diverse and ranges from the convenient concealed model to the pragmatic surface-mounted version. Every design wish, every functional requirement and even special requests can be satisfied.

Would you rather a lavish overhead shower for an impressive cascade or a handset for flexible showering? All necessary fittings are available in the characteristic soft-edge design; even details like the wall union for the shower hose attest to the design features. Then there are matching shower rails and hoses – in short, everything needed to design a custom bathroom.

KLUDI E2 Accessories

There is a place for everything – and mixing styles is avoidable – as there is a high-quality line of accessories in the soft-edge design to match KLUDI E2. Chrome-plated metal and hand-blown opal glass show off the lines of KLUDI E2's design to advantage: Towel holders, soap dispensers, toilet paper holders, tooth mugs – for a uniformly customised bathroom.

KLUDI BALANCE

Complete harmony

KLUDI BALANCE radiates soothing calm. Crisp lines are combined with gentle curves in a timeless design, which is the perfect match for discriminating bathroom concepts. The lever seems to float above the mixer body. Fitting like a glove on the hand with its beautiful lines, it regulates the flow of water precisely.

Superior quality design and an appearance with sophisticated details

The plane, highly polished surfaces of the mixer body are produced in a complex process. The diverter for the shower function has been integrated. It is easy to grasp by the crosspiece even with wet hands. The mixer body cleverly conceals the escutcheons – superior quality design and an appearance with sophisticated details.

single lever bath and shower mixer DN 15
524450575

Integrated diverter for the shower function. It is easy to grasp by the crosspiece even with wet hands.

Fine design and modern technology transform bathrooms into personal oases for relaxation. Just turn off the stress, KLUDI fittings make it possible.

single lever basin mixer DN 10
520230575

Award-winning design and functions

The single lever basin mixer from the KLUDI BALANCE range was awarded the renowned iF product design award in 2012 for the harmonious interplay of naturalness and functionality. It impressed with its timeless design.

The electronic basin mixer with sensor technology was given the Plus X Award for high quality, design and ease of operation. Just hold your hand in the sensor zone, which is clearly marked, and the water will start running immediately – hygienic and clean, as there is need to actually touch the mixer. When you move your hands away, the water will stop running immediately. This saves water and energy.

2012

KLUDI BALANCE makes convenience tangible

The single-lever bath filler and shower mixer for deck mounting has been designed for free-standing baths. Its beautiful form and the modern technology make it a real eye-catcher in high-standard bathroom interiors. One special feature of the three-hole, rim-mounted bath mixer is the retractable handset.

Use the KLUDI s-pointer so that bathwater runs almost silently into the bath. Simply tapping it with your finger allows you to adjust the angle of the stream of water as you like. The water flows elegantly over the rim instead of gushing loudly into the bath. So you can have a relaxing bath even late at night.

KLUDI BALANCE WHITE

So pure. So clean. So light.

KLUDI BALANCE WHITE stirs the emotions. Pure white gives a new intensity to the sense of purity and freshness. Discreet chrome accents allow the white surfaces to gleam. The subtle purity of colour accentuates the airiness of the lines.

Gleaming white in premium quality

KLUDI BALANCE WHITE enhances the lines with a further design feature: the surface. KLUDI sets particular store by its workmanship. Superior finishing is what lends the pale surfaces their brilliance and durability. This ensures the mixers remain beautifully white for a long time.

single lever basin mixer DN 10
520239175

single lever bath and shower mixer DN 15
524479175

Harmony and extravagance in bathroom design

KLUDI BALANCE WHITE makes it possible to design exceptional bathrooms. The white mixers form one harmonious unit together with white ceramics. This is accentuated discreetly by the chrome-plated elements. Dark wood mosaics provide a striking contrast with the white mixers. KLUDI BALANCE WHITE appears wonderfully light in combination with natural materials like travertine and wood. When you combine the purist mixers with waxed steel, the result is extravagant bathroom design for loft apartments and boutique hotels.

The new style of mixers for a contemporary lifestyle

In contemporary architecture, bathrooms and bedrooms are no longer clearly delineated. Free-standing baths evolve to become an eye-catcher in open-plan living. KLUDI BALANCE WHITE is simply made for this lifestyle. In a comfortable white model, the single lever bath and shower mixer for deck mounting seems less like a bath mixer. First and foremost it looks like a stylish design feature, fitted with modern technology to satisfy demanding requirements.

KLUDI Q-BEO

Striking cubism

KLUDI Q-BEO acknowledges its debt to the cubic form – masculine and intense. Rounded edges and inlaid levers lend the range its striking visual identity.

A strong design statement

Large, angular, solid – if you're looking for the exceptional, you've found it in KLUDI Q-BEO. The cube-shaped mixers for washbasins, baths and showers are simultaneously eye-catching design objects. It's a good thing that they aren't only available as individual pieces. Whole bathroom interiors can be fitted with KLUDI Q-BEO.

When it comes to large washstands, for instance, the KLUDI Q-BEO single lever mixer with side control increases the KLUDI freedom of movement. The flow of water and temperature can be adjusted with pinpoint accuracy. As the control is on the side, the spout, which can also be swivelled, gains in height. The robust, single-piece mixer body is of especially high quality and, together with the side-operating mechanism, lends a very homogeneous appearance. The purist L-shaped spout is designed in the cubic style of the KLUDI Q-BEO line.

One sophisticated design feature is the installation of the surface-mounted mixer flush with the wall, as it covers the escutcheons, which would otherwise be visible.

KLUDI MX

Sophisticated functions

The basin mixer is the highlight in this range of fittings: it has integrated height adjustment, which creates up to 10 cm space for greater KLUDI freedom of movement. The lifting effect is not visible when the mixer is in the base position. This is how much versatility a single lever mixer can offer.

With added function and safety

The KLUDI MX thermostatic shower mixer is convenient and safe. It allows the desired temperature to be set quickly and kept constant while you shower. The KLUDI SafeTouch function reliably stops the thermostat surface from getting hot. In addition, the KLUDI HotStop anti-scald limiter, which has been set at 38 °C, protects you from scalding.

Base position

The single-lever sink mixer with the easy-clean, loop lever has integrated height adjustment, which is concealed when it is the base position.

Adjusting height

Adjusting the height provides 10 cm space for KLUDI freedom of movement between the washbasin and mixer. This makes it easy to fill tall containers with water.

Lowering

To lower, release the lock and push the mixer down gently until it locks back into place. It is easy to do this in a controlled movement thanks to the buffer.

KLUDI O-CEAN

Refreshingly natural

The water is clear and flows onto your hands in a gushing cascade. A wonderfully refreshing experience, as in untouched nature itself. KLUDI has also taken the environment into consideration in its technology: the pre-set 50% flow limiter acts to save water in the long term. It is very simple to adjust the flow of water and temperature using the joystick.

Chrome-plated, removable covering

You are unable to see it but the single-lever bath filler and shower mixer is mounted on the wall. A chrome-plated covering cleverly conceals the escutcheons. It is easy to remove and clean. The flat surface can also be used as practical storage space if needed.

KLUDI BINGO STAR

Plenty of freedom of movement

The tall, dynamic spout and side operation are characteristic of the individualistic mixer. KLUDI BINGO STAR creates an unusual amount of KLUDI freedom of movement between the mixer and the washbasin, which can be made the most of on an individual basis.

Tall spout can be rotated 360°

In addition to KLUDI freedom of movement, KLUDI BINGO STAR offers a choice of two different models of fittings: the single-lever basin mixer with a 360° swivelling spout or with a 30°/30° stop limiter.

KLUDI BOZZ

A matter of pure form

KLUDI BOZZ celebrates the cylinder in its archetypal form. The whole range of mixers has been designed from cylindrical bodies, which are in perfect proportion to one another. Reduced to the pure form!

The cylinder in all its diversity

KLUDI BOZZ shows how well cylindrical forms match one another. The combination looks as harmonious in a mixer as in an entire bathroom line. Whether as a pillar valve with discreet head controls, as a single lever mixer for modern wash bowls or as a three-hole mixer with tall spout – KLUDI BOZZ offers the widest variety of solutions for public areas, the catering industry and private bathrooms.

KLUDI ZENTA

Exceptional variety

The fundamental architectural forms of cylinder and rectangle determine the character of KLUDI ZENTA. The line includes a range that is impressive in its variety. KLUDI ZENTA offers the right solution for virtually every possible use, regardless of whether it concerns a washbasin, bath or shower. The design line even continues into the kitchen.

More room to manoeuvre below the spout: they can do more than wash hands

If you use the washbasin for more than just washing your hands, then you should consider KLUDI's VersatilityPlus concept for ZENTA. For if you occasionally use the mixer to wash your hair or to fill buckets, then the single-lever mixers really score thanks to the side controls.

single lever basin mixer DN 10
420250575

On the one hand, the spout is higher and is convenient to swivel; on the other hand, the side mixer lever is positioned favourably for maximum ergonomics for all possible uses. These mixers also show off their merits at any large washbasin: the mixer can be swivelled farther and the water has a longer reach than with a conventional single-lever mixer. And (last but not least): the side control is easy to clean, as it can be turned off with wet hands after use, without the mixer getting spattered with splashes of water and soap.

And into the bargain, the whole unit even looks good: the single-piece mixer body forms a solid unit together with the side-operating element. The flow of water and temperature can be adjusted with customary pinpoint accuracy. And thanks to the consistent red/blue markings, it is still clear whether cold or hot water is running, even when in the 45 degree position. The ZENTA line offers the right solution for every possible use with three different single-lever basin mixers with side controls.

electronic controlled basin mixer DN 15
3810005

Hygienic thanks to sensor operation

The KLUDI ZENTA electronic mixers control the flow of water without you touching them. This ensures a maximum of hygiene in public buildings, offices and catering industry. As sanitary areas are used intensively in these areas, efficient use of resources is an important argument in favour of the sensor-operated mixers in the KLUDI ZENTA design.

As a result of optical object detection, the flow of water will start as soon as the infrared sensor has recorded movement. However, not until all three installed sensors have responded. This effectively prevents unintentional triggering, by drops of water on the sensor field for example. Intelligent technology thus contributes to limit consumption of energy and water in a practical way.

Washrooms with high footfall and private bathrooms can be fitted to a high standard with the KLUDI ZENTA electronic mixers, resulting in great practicality and an attractive appearance. Three models are available: with temperature dial and mixer lever, with pre-adjustable mixer shaft or as pillar valve, fitted either with a mains adapter or battery as needed.

Sensor control is non-contact. The flow of water starts as soon as the intelligent infrared technology registers movement.

Water temperature can be set to suit using the mixer screw.

Thermostatic shower mixer DN 15
351000538
3S shower set
6084003-00

Showering with the right temperature and three different jets of water

In just seconds, the thermostat mixes the right temperature and keeps it constant. The KLUDI HotStop prevents scalding with a built-in anti-scald limiter. You can choose from three different settings for the jet of water for the handset – for personalised showering pleasure.

Volume jet
The volume jet remains constant in width and intensity.

Rainshower
The rainshower has a circular arrangement that ensures a gentle, caressing shower.

Booster
The booster centres the jet in the middle of the shower head, creating an invigorating and massaging stream of water.

KLUDI OBJEKTA

Cuts a good figure
everywhere

From KLUDI OBJEKTA MIX NEW comes KLUDI OBJEKTA. The successful product range takes up the trend for softer lines and at the same time keeps its fundamental, sleek architectural structure. The durable mixers and showers fit in harmoniously with different bathroom interiors.

Perfect harmony at large washstands

More and more bathrooms nowadays are fitted with large washstands. The KLUDI OBJEKTA single lever basin mixers with side control are perfectly in keeping with these. Their generous proportions are the result of the taller spout, which provides more convenient KLUDI freedom of movement between the mixer and the washstand. Flexibility is improved since the spout can also be swivelled to the side.

The flow of water and temperature are adjusted with customary accuracy using the side operating mechanism. This is also in the KLUDI OBJEKTA design and fits in perfectly with the single-piece mixer body, which proves itself to be very robust and of high quality. The curved, cylindrical spout has been coordinated to match the classic-modern KLUDI OBJEKTA design.

single lever bath and shower mixer DN 15
326530575

single lever bidet mixer DN 15
324160575

Contemporary, ergonomic, convenient

With an upright mixer body and slightly curved upper surfaces on the spout, KLUDI OBJEKTA is testament to contemporary design. The use of form is pleasantly understated and yet makes its own distinctive mark. In daily use, KLUDI OBJEKTA provides convenience and reliability. The operating elements are designed to be ergonomic, the curved surfaces are simple and quick to clean.

KLUDI LOGO NEO

The logical choice

Sleek lines and reliable technology are what characterise KLUDI LOGO NEO as a member of the KLUDI family of mixers. The flat spout and precise edges are typical of the practical use of form. KLUDI LOGO NEO makes choosing a quality mixer easy.

Saves money, helps protect the environment

Contemporary and economical – two attributes that accurately describe KLUDI LOGO NEO. The line of mixer taps impresses with its refreshing design, and it spares the wallet and helps save natural resources thanks to its dual function. KLUDI's EcoPlus function saves energy: when you turn the tap on in the centre position, only cold water will run. No loss of comfort when washing your hands, cleaning your teeth or running water for plants. But considerable savings for the household's energy bill.

On top of this, the EcoAir mode used for the washbasin mixer, cuts the amount of water used for washing hands every day by up to 40 per cent – by aerating the water you still have a full flow of water.

A single-lever basin mixer with side control is also included in the extended range. There is more convenient KLUDI VersatilityPlus available below the tall, swivelling spout. The flow of water and temperature can be adjusted using the handle on the side. Incidentally, this makes life particularly easy when you're cleaning, as it can be turned off if your hands are wet, without the tap getting splattered with splashes of water and soap.

KLUDI TERCIO

In keeping with the times
in any form

KLUDI TERCIO mixer are interpreted in the design language of our time: mixer bodies with straight lines harmonise with soft surfaces. Broader handles and spouts belong to the modern silhouette of KLUDI TERCIO. The slightly curved surface is pleasant to the touch. Entire bathroom interiors can be created in KLUDI TERCIO design thanks to the extended range of products.

The new generosity of scale

A new generosity of scale predominates in modern bathrooms. The XL single-lever mixer in KLUDI TERCIO design is tailor-made for this. The extra-large mixer looks at its best when fitted on large-size washbasins. The single-lever mixer with controls on the side provides even more KLUDI freedom of movement between the washbasin and mixer. The bath mixer is very versatile to use with its taller, swivelling spout. Water can run off easily from the curved surfaces of the lever and spout – resulting in extra ease of cleaning.

KLUDI STANDARD

The term for reliability

KLUDI STANDARD has been a byword for rock-solid reliability for many years. The long-established range of mixer is robust enough to be still working perfectly even after years of intensive use. You can depend on KLUDI STANDARD at any time – in each combination of components.

KLUDI ROTEXA

Running bath water is quieter with KLUDI ROTEXA

Noisy splashing is a thing of the past. With KLUDI ROTEXA, bathwater runs quietly along the rim of the bath – straight from the filling valve. The modern filler, waste and overflow fittings are built into the bath. So you can enjoy a bath in peace at any time of day or night without disturbing your neighbours.

KLUDI PUSH

Extra showering enjoyment

A concept for running showers and bath that is as straightforward as it is ingenious: the water is turned on and off with a simple press of the ergonomic push-button and the temperature is preset at the thermostatic handle. This represents real convenience for young and old alike, and for every stage in life, since the mechanical buttons click quietly but audibly when pressed, while not actually retracting into the mixer. So you can feel them at all times – even when your face is covered in lather.

The buttons can even be customised during installation and two consumer units, overhead shower and body jet for example, can be connected at the same time. KLUDI PUSH is supplied with a round or square escutcheon in the soft-edge design and is robust and easy to clean.

JOOP! Accessories

People who furnish their bathroom with JOOP! from KLUDI manifest a sense of style – which goes beyond the mixer. This is why the superior accessories in the collection – towel holders, soap dispensers, glass holders, shelves, paper holders and toilet sets – are more than just practical aids. They are highly decorative elements in gleaming chrome and the finest crystal that reflect the lifestyle and flamboyance of JOOP! in every aspect of the bathroom.

Accessories that are as beautiful as the fittings

There is a separate, comprehensive accessory line for the KLUDI AMBA. It is perfectly matched to the fittings, allowing bathrooms to be uniformly configured in the KLUDI AMBA design. Hooks, handles and brackets have a high-quality chrome finish; insets are made of fine porcelain.

KLUDI PLUS

The versatile bathroom

The art of bathroom design is to make the best use of the available space. KLUDI PLUS was developed with this for this purpose. The collection comprises ceramic products for washbasins, toilets and bidets, mirrors – and elegant bathroom furnishings.

Three different options to enlarge it make this bathroom totally versatile: as a small bathroom through to a family bathroom. The design concept provides a wide range of styles for contemporary living with convincing details. It is a perfect match for KLUDI's premium mixer and lines of accessories.

NEW

Stage 1

Countertop basin with counter unit – these form the basis of the KLUDI PLUS concept.

Stage 2

The base cabinet matches the counter modul unit. This base cabinet provides useful storage space for the guest bathroom.

Stage 3

The double counter modul unit stands for practical design. The furniture also offers enough room when storage requirements are higher.

Small bathroom – put to perfect use

Small or guest bathrooms represent the ultimate in bathroom planning. Intuitive functions and a high standard of design are called for. Especially where planning and realisation are concerned, KLUDI PLUS demonstrates its strengths and its great flexibility. The set of furnishings is available for three stages, depending on the size of the household and amount of storage space required. There are two matching ceramic solutions for the washbasin area: a countertop basin and a wall-hung basin.

Two mirror designs – with and without lighting elements – offer practical details. One example: the cabinet doors have no need of handles thanks to the sophisticated fasteners. A slight touch is all it takes.

Bathrooms that are carefully thought-through

When planning bathrooms, conceptual skills are called for. KLUDI PLUS presents a balanced, compact concept that can also be upscaled – and can then be used for a multi-generational bathroom. The bathroom experts at KLUDI have given some thought to the design of the ceramic fixtures too. The toilet and bidet have been designed to be compact while simultaneously allowing for maximum ergonomics. What is more, they offer a number of intelligent details.

Intelligent and easy to clean

A clean solution: the toilet seat can simply be removed for cleaning by pressing a button and put back in place just as easily.

Intelligent and tasteful

No more excuses for leaving the toilet lid open, no reason to bang the lid shut: a slight tap is all it takes and the toilet lid will close gently.

KLUDI A-XES

KLUDI design accessories

Contemporary and classy, light and graceful – this is the effect KLUDI A-XES gives. The accessories are the ideal addition to the KLUDI fittings. Their distinct use of form with cylinders and cubes makes it possible to combine them with every bathroom design.

SHOWERS

For personalised
showering

Handsets and overhead showers, Dual-Shower-Systems with or without thermostats, various design lines and practical functions – KLUDI's shower programme offers a wide choice of solutions to meet different types of installation and individual shower habits.

KLUDI Dual-Shower-Systems: more scope for individuality

The KLUDI dual-shower systems help in designing bespoke showers! This is primarily due to the individuality of the systems. They can be adjusted exactly to fit the situation where they are to be installed and to meet individual requirements. Today more than ever, because KLUDI has further perfected the options for making adjustments to dual-shower systems.

The height tolerance of up to 30 centimetres makes it possible, for example, to install a KLUDI dual-shower system even when ceilings are low. The problem of a water-conducting shower rail that is too long no longer exists. Even the arm of an overhead shower can be infinitely adjusted, so that it can be best adapted to the given situation and showering habits of the users.

By installing the water-conducting shower rail, a height tolerance of up to 30 cm is gained, giving you new potential. This means KLUDI dual shower systems will also fit under low ceilings.

During installation, the shower arm, which can be swivelled sideways, can be adjusted steplessly to fit perfectly to the situation and the showering habits of users.

KLUDI FIZZ

Elegance and energy of the fan array

Unique and with a gentle stream of water:
the array design of KLUDI FIZZ showers.
The unusual design generates a jet of water
that retains its energy.

The combination of chrome with a brilliant white
shower-head base sets a strong, new trend in
design: fresh, clean, crisp.

The perfect shower with a full and gentle jet of water

The triple-head shower that looks like a propeller combines its striking design with a maximum rain shower. The position of each of the three showers can be moved so that the jet of water can be directed individually.

The unique handset with the fan array can be adjusted with a choice of three types of jet. It is child's play to switch between the volume jet, booster and smooth line thanks to the effortless adjustment. The adjustment has been positioned ideally in terms of ergonomics.

Volume jet

The volume jet with 75 nozzles is uniformly wide and soft.

Smooth Line

The Smooth Line stream aligns the wide yet gentle jets of water in one row, thus generating a consistent, parallel flow of individual jets.

Booster

The booster centres the jet in the middle of the shower head, creating an invigorating and massaging stream of water.

6757505-00

Individually adjustable dual-head shower

Something to look forward to every day: the KLUDI FIZZ dual-head shower generates a wonderfully dense rain shower, which is adapted perfectly to the human body. Both showers can be adjusted individually for this. Whether in a linear arrangement or in opposite directions, everyone can have the pleasure of their own individual shower with KLUDI FIZZ.

6758005-00

head shower DN 15
6758005-00

The handset as an overhead shower

KLUDI FIZZ represents the new model overhead shower: simply twist the handset into the overhead shower holder. The unique concealed mounting is practical and versatile. The handset is easy to exchange when needed. Both the single handset and the version with three types of jet can be fitted into the overhead shower holder. The shower can be directed using the ball joint – up to an angle of 36°.

KLUDI showering hygiene

After each shower, the residual water will drain from the KLUDI FIZZ handset. That results in greater hygiene for showers and prevents annoying dripping.

KLUDI FRESHLINE

Sheer showering enjoyment

A large overhead shower is an essential part of the perfect experience. KLUDI also offers this as a retrofit version: the thermostat dual shower system in the KLUDI FRESHLINE stands for multidimensional showering enjoyment. All you need is a water connection and the determination to maximise your personal comfort in the shower. The shower system includes a 25-centimetre overhead shower, a flexible 3S handset and shower mixer with a thermostat control. The thermostatic mixer delivers water at a pleasant temperature and has Hot-Stop scald protection.

NEW

KLUDI FRESHLINE

The new arrival in the high-end

All good things come from above: KLUDI's FRESHLINE sets new highlights for high-end showers with a diameter of 14 centimetres. Its body is made of superior, gleaming chrome-plated plastic. The soft anti-limescale spray nozzles produce a clean drenching shower even in hard-water areas – simply wipe away limescale with a sponge.

The white shower-head base provides the visual highlight for this chrome-plated handset: it comes with one spray pattern (volume jet) or as a version with three spray patterns (3S), which can be changed by simply twisting the shower-head base.

To provide maximum hygiene, the 3S shower has a drain function – after showering, the residual water is simply drained from the shower head. No irritating drips and no need to wipe up after your shower.

Volume jet

The volume jet uses the width of the 14-centimetre shower-head base and is broad and soft.

Smooth Line

Mini-aerators mix air into the water for the "Smooth Line" mode. The result is a broad and gentle stream of water.

Booster

The "Booster" mode produces an invigorating massager jet.

KLUDI A-QA

A different shower
every day

KLUDI A-QA is just like water: refreshing and new, time and again. The line includes a huge variety of individual showers and combined shower sets. The assortment ranges from the handset with several types of adjustable jets to numerous thermostatic dual-shower systems and the shower family.

The dual-shower system with large disc shower head

What type of shower is it to be? KLUDI's A-QA dual thermostatic shower system combines a maximum rain shower from the large disc shower head with a handset with three adjustable types of jets. The smaller Eco-jet handset from the KLUDI A-QA range of showers uses up to 50% less water.

The slider rail is mounted close to the wall, thus saving space. This satisfyingly provides generous freedom of movement. The KLUDI shower hygiene function ensures that any residual water flows off fast and easily, preventing any dripping. The KLUDI HotStop offers reliable protection against scalding thanks to its anti-scald limiter.

By installing the water-conducting shower rail, a height tolerance of up to 30 cm is gained, giving you new potential. This means KLUDI dual shower systems will also fit under low ceilings.

During installation, the shower arm, which can be swivelled sideways, can be adjusted steplessly to fit perfectly to the situation and the showering habits of users.

Thermostatic-Dual-Shower-System DN 15
6609505-00

A gentle shower, rainshower or invigorating jets of water

As the water flows from the 97 apertures in the adjustable KLUDI A-QA handset, this creates a volume jet to pamper your skin every day. The rainshower is so soft that even children will enjoy showering. The effect from the booster is fabulously invigorating.

Volume jet

The volume jet remains constant in width and intensity.

Rainshower

The rainshower has a circular arrangement that ensures a gentle, caressing shower.

Booster

The booster centres the jet in the middle of the shower head, creating an invigorating and massaging stream of water.

KLUDI A-QA v: installing the wall rail without any drilling
Installing a new wall rail often involves drilling new holes. The KLUDI A-QA v wall rail provides an elegant solution, as it can use existing drill holes. Its flexible wall mounts can be adjusted up or down by 1020 mm. This means they can be mounted right where the existing drill holes are. The ideal solution for quick and tidy renovation without further damage to the tiling.

KLUDI LOGO

A drenching shower –
attractive in appearance too

Fine design, highly functional and top quality: even in the basic segment, KLUDI has now created a concept for greater showering enjoyment. In relaunching the LOGO series, the expert for showers gives a new definition to state-of-the-art. A drenching shower in the starter model range has never been so stimulating – even in its looks!

NEW

A choice of three spray patterns

The rainshower is the standard pattern for the new LOGO handsets: an invigorating stream of water that spreads to a comfortable width just a few centimetres over your head. A real pleasure!

In addition, the 3S handset has a booster jet that will direct a massage to really hit the spot and a gentle smooth spray, where the flow is pleasant and does not splash. The 3S handset with its three spray patterns has a drain function for consummate hygiene too. After showering, the residual water is simply drained from the shower head. This keeps irritating dripping and wiping up to a minimum.

The new KLUDI LOGO slider rails ensure that the LOGO handsets are always in reach when you're under the shower. With a transparent shower bracket that makes it simple to remove the handset and put it back. It is easy to undo the knob with wet hands and to lock it back in position on the rail. The rail is available in genuine chrome-plated brass in 60 and 90 centimetre lengths – with matching LOGO flex hose in a length of 160 centimetres.

Volume jet
The intense volume mode comes out broad and soft from the evenly spaced jets – this ensures that it covers a wide area even from a low height.

Smooth
The smooth spray is generated by six mini-aerators, which mix air into the water, thus ensuring a gentle stream of water.

Booster jet
The “booster” mode delivers a directed massager jet that energises the skin and releases tension.

KLUDI MEDI CARE

For nursing and
care homes and hospitals

The arm lever, which swivels to the side, has a plastic casing that makes it easy to grasp, especially for the nursing sector. The safety cartridge with anti-scald limiter can be adjusted individually to suit local conditions. Initially there is no flow of cold water from the mixer. The Care stream regulator does not take in air and thus prevents formation of aerosols. The KLUDI SIRENA CARE slider rails can be gripped securely and demonstrate a tensile strength of 130kg, as tested by TÜV.

KLUDI PROVITA

Meets special requirements

KLUDI PROVITA makes life easier for older people and those dependent on care, who have special needs when it comes to their home environment. The fittings are particularly safe and hygienic, the extended control lever provides a good grip. The special range has been designed for use in doctors' offices, hospitals, care facilities and in the home.

public lever
7493005-00

Convenient to use, maximum safety

KLUDI PROVITA blends in harmoniously with different bath facilities. It is also possible to operate the control lever using the lower arm or elbow. Two versions of lever can be combined with the mixer bodies. The public arm lever with a 120mm reach is intended for convenient use in private buildings. The 180 mm reach is suitable for use in hospitals and care and nursing homes.

The KLUDI HotStop anti-scald limiter has been pre-set in the thermostatic shower valve. It is not possible to override it in daily use. Thermal disinfection is still possible if needed to provide protection from bacteria, in particular Legionnaires' disease. The curved surfaces are easy to clean and particularly hygienic. The spout on the wall mixers can be swivelled by 120° or locked in the centre position.
