

Hydraulic Sweeping Machine (Broomer) Model : MB 20

Making Marvels in
Turnkey Projects!

INTRODUCTION

'Maxmech' Hydraulic Sweeping Machine Model:

MB 20 is a compact design built with state-of-the-art technology. The cleaning brush is driven by a powerful hydraulic motor & dust is collected into a waste collecting container in running conditioner. Sweeping is used for cleaning roads, streets, highways, petrol pumps, parking plots, etc. and especially for cleaning WMM / WBM layers prior to bituminous coat. The swept material is collected into a waste collection container that may be emptied by cable operation. The machine is powered by a tractor through quick release hydraulic hose attachment.

SALIENT FEATURES

- Quick mounting with tractor / fork lift; due to three point linkage system
- Easy to operate and maintain
- Sweep and collect @ 6 km / hr or 13800 m²/hr
- Long life polypropylene (PPN - pure) brush; not PVC or Nylon
- Technically cost effective and versatile in application
- Maintenance free hydraulic drive
- Machine can be lifted by tractor hydraulic for quick transportation
