## Staphylococci Staphylococcus species

**Staphylococcus aureus**

- Skin infections
- Septicemia
- Carcinoma
- Nosocomial pneumonia
- Endocarditis
- Toxic shock syndrome
- Food poisoning

**ANTIBIOTIC RESISTANCE**

**PENICILLINS** → Oxacillin, Nafcillin

**OTHER** → Vancomycin

**OTHER** → Clindamycin, Rifampin, Fusidic acid, Cloxacillin

1. Most isolates resistant to penicillin G.
2. Used in methicillin-resistant isolates.
3. Used in vancomycin-resistant isolates.

Colonies are yellow

Staphylococcus aureus cultured from a wound infection.

Staphylococcus aureus on blood agar surrounded by zone of beta hemolysis.

- Gram-positive, staining easily
- Round cocci tending to occur in bunches like grapes
- True facultative anaerobic organisms.
- Cultured on enriched media containing broth and/or blood

**Staphylococcus epidermidis**

- Infections of catheters and heart valves.

**ANTIBIOTIC RESISTANCE**

**PENICILLINS** → Oxacillin, Nafcillin

**OTHER** → Vancomycin

1. Most isolates resistant to penicillin G.
2. Used in methicillin-resistant isolates.

**Staphylococcus saprophyticus**

- Cystitis in women

**ANTIBIOTIC RESISTANCE**

**PENICILLINS** → Penicillin G

**OTHER** → Cephalosporins, Tetracyclines, Aminoglycosides, Macrolides, Fluoroquinolones, Chloramphenicol

Folliculitis caused by *Staphylococcus aureus*

Carbuncle caused by *Staphylococcus aureus*

Furuncle caused by *Staphylococcus aureus*

Scanning electron micrograph of cardiac pacemaker lead colonized by *S. aureus*

Staphylococcal scalded skin syndrome

Superficial impetigo

Summary of Staphylococcal disease

# Dbios MICROBIOLOGY CHARTS

Size 20"x26"  
Size 20"x26"

Charts Laminated and attached with durable strips  
Charts Laminated Framed on NU-Board

## Introduction to Microbiology

- MB 1 Comparison of prokaryotic and eukaryotic cells.
- MB 2 Classification of medically important bacterial families.
- MB 3 Classification of medically important virus families.

## Normal Flora

- MB 4 Normal flora in Human Body (Skin, Eye, Mouth and nose, G. E. Tract, vagina)

## Pathogenicity of Microorganisms

- MB 5 Bacterial Pathogens Id50 v/s LD50, Adhesion to host cell membranes, Action of exotoxins, Koch's postulates.
- MB 6 Types of viral pathogenesis, Dissemination of virus to secondary sites in the body, Mother-to-infant.

## Diagnostic Microbiology

- MB 7 Laboratory techniques in diagnosis of microbial diseases. Effect of sensitivity and specificity of a test on the presence of false-positives and false-negatives. Steps in Gram stain method.
- MB 8 Tests commonly used in identifying bacteria.
- MB 9 Immunologic detection of microorganisms.
- MB 10 Detection of Microbial DNA or RNA

## Vaccines And Antibiotics

- MB 11 Bacterial Vaccines (DTaP, Childhood immunization)
- MB 12 Formulation of Some of the vaccines.
- MB 13 VIRAL VACCINES Candidates for hepatitis immunization. HBsAg = hepatitis B surface antigen.
- MB 14 DNA VACCINES produce antigen needed to generate immunity. MHC = Major histocompatibility complex.
- MB 15 Summary of therapeutic applications of selected antiviral agents.

## Bacterial Structure, Growth And Metabolism

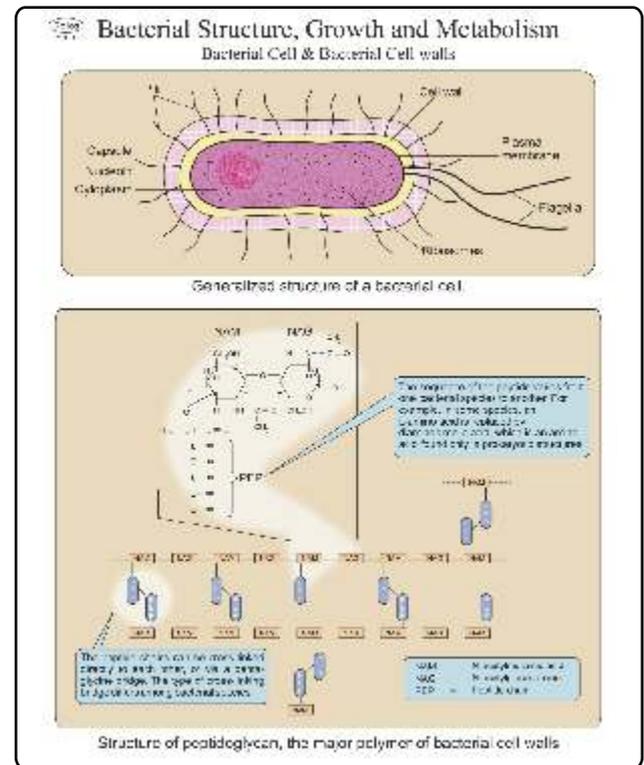

- MB 16 Bacterial cell & Bacterial cell walls.
- MB 17 Comparison of gram-positive and gram-negative bacterial cell.
- MB 18 Synthesis of a bacterial cell wall.

## Bacterial Genetics

- MB 19 Bacterial growth.
- MB 20 Bacterial genome & Bacterial replication
- MB 21 Visual detection of bacteriophage by the plaque method.
- MB 22 Gene Transfer - A. Conjugation, B. Transduction, C. Transformation.
- MB 23 Gene Regulation - A. Negative control (repression) B. Positive control (catabolite activation)

## Staphylococci

- MB 24 Staphylococci - Staphylococcus Aureus, Infections & Causes of Diseases
- MB 25 Staphylococcus species (Summary of staphylococcal disease.)

MB 16 Bacterial cell & Bacterial cell walls.

MB 25 Staphylococcus species (Staphylococcal disease.)

Size 20"x26"  
Size 20"x26"

Charts Laminated and attached with durable strips  
Charts Laminated Framed on NU-Board

### Streptococci

- MB 26 Streptococcus pyogenes.
- MB 27 Streptococcus species (Summary of streptococcal disease)

### Gram-positive Rods

- MB 28 Corynebacteria species (Summary of Corynebacterium diphtheriae disease).
- MB 29 Bacillus species (Summary of anthrax disease)
- MB 30 Listeria species & Life cycle

### Neisseriae

- MB 31 Neisseria species (Summary of neisseria diseases).

### Gastrointestinal Gram-negative Rods

- MB 32 Escherichia species & Salmonella species .
- MB 33 Campylobacter species (Summary of campylobacter disease).
- MB 34 Mechanism of shigella infection causing diarrhea & Shigella disease.
- MB 35 Vibrio & Yersinia species.
- MB 36 Helicobacter disease & Infection.

### Gram-negative Rods

- MB 37 Infection by Haemophilus influenzae & species.
- MB 38 Bordetella pertussis & Disease
- MB 39 Legionella species (Summary of legionella disease).
- MB 40 Pseudomonas species & infection of ear.
- MB 41 Brucella species & Transmission
- MB 42 Francisella species (Summary of francisella species).
- MB 43 Epidemiology & pathogenesis of plague .
- MB 44 Bubo characteristic of infection due to yersinia pestis & species.

### Clostridia and other Anaerobic Rods

- MB 45 Toxic & degradative enzymes produced by clostridium perfringens. ET=enterotoxin.
- MB 46 Mechanism of botulinum toxin. AcCoA = acetyl CoA. & Tetanus toxin.
- MB 47 Clostridium species (Summary of clostridial disease).

### Spirochetes

- MB 48 Clinical stages of untreated syphilis.
- MB 49 Clinical stages of untreated Lyme disease.
- MB 50 Treponema & Borrelia species.
- MB 51 Leptospira species (Summary of Leptospira species)

### Mycoplasma

- MB 52 Mycoplasma species (Summary of mycoplasma disease).

### Chlamydiae

- MB 53 Reproduction cycle of Chlamydia.
- MB 54 Chlamydia species (Summary of Chlamydia disease).

### Mycobacteria And Actinomycetes

- MB 55 Mycobacteria classification, T.B. & Progressive of active T.B. Infection.
- MB 56 Mantoux skin test for T.B.
- MB 57 Mycobacterium species (Summary of mycobacterium disease).

### Rickettsiae

- MB 58 Classification, micrograph, Spotted fevers & Rickettsia disease.

### Fungi

- MB 59 Classification of pathogenic fungi.
- MB 60 Cutaneous & subcutaneous mycoses.
- MB 61 Systemic mycoses.
- MB 62 Opportunistic mycoses:- Candidiasis, Cryptococcosis, Aspergillus, Mucormycosis, pneumocystis.

### Protozoa

- MB 63 A. Life cycle of Entamoeba histolytica. B. Photomicrographs of trophozoite and cyst forms.
- MB 64 Intestinal protozoal infections .
- MB 65 Urogenital tract infections.
- MB 66 Blood and tissue protozoal infections.
- MB 67 Life cycle of Leishmania.

### Helminths

- MB 68 Cestodes infection.
- MB 69 Trematodes Infection.
- MB 70 Nematode infection.
- MB 71 Intestinal nematode infections.

### Viruses

- MB 72 General structure, Classification families.
- MB 73 Replication cycle of VIRUSES.
- MB 74 Replication of DNA VIRUS
- MB 75 Mechanism of RNA virus genome replication.
- MB 76 Effects of Viral infection on Host cell.

### Nonenveloped DNA Viruses

- MB 77 Classification of Non enveloped DNA viruses.
- MB 78 Relationship between steps in the development of a skin wart and the Life Cycle of papilloma virus.
- MB 79 Adenovirus infection.
- MB 80 Replication of B19 parvovirus.

### Enveloped DNA Viruses

- MB 81 Classification of enveloped DNA viruses.
- MB 82 Structure & Replication of herpes viruses.
- MB 83 Primary & Recurrent herpes simplex infections.
- MB 84 Time course of varicella (chickenpox) in children. In adults, the disease shows a longer time course and is more severe.
- MB 85 Properties of common herpes virus infection.
- MB 86 Time course of smallpox.

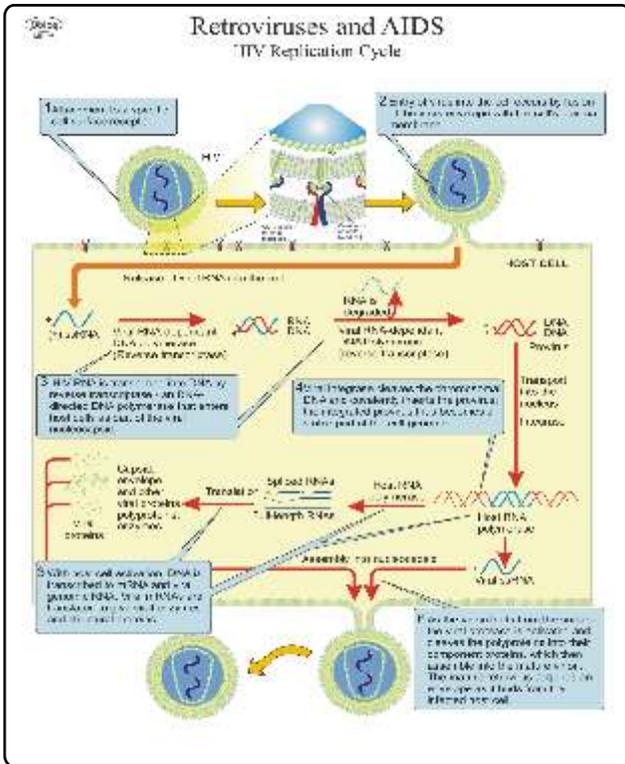

### Hepatitis B & Hepatitis D (delta) Viruses

- MB 87 Classification of major viral agents causing hepatitis. [Note: Hepatitis D is a defective virus and is classified in its own "floating" genus. Hepatitis A, C, and E are discussed .]
- MB 88 Replication & Hepatitis B Virus.
- MB 89 Typical course of hepatitis B virus infection. A. Acute infection. B. Chronic infection.
- MB 90 Structure of hepatitis D & consequences of HDV infection.

## MB 98

The HIV Replication cycle.

## MB 103

Schematic representation of pathogenesis of rabies infection.

## Positive-strand RNA Viruses

- MB 91 Classification of positive-strand RNA viruses.
- MB 92 Polio virus infection & CNS invasion.
- MB 93 Pathogenesis of the common cold showing stages from infection to recovery.
- MB 94 Pathology of rubella virus infection.
- MB 95 Summary of hepatitis A, B, and C.

## Retroviruses and AIDS

- MB 96 Classification of retroviruses that cause disease in humans.
- MB 97 Structure of HIV virus
- MB 98 HIV replication cycle.
- MB 99 Common modes of transmission of HIV.
- MB 100 Pathogenesis of HIV.
- MB 101 Typical time course of HIV infection.

## Negative-strand RNA Viruses

- MB 102 Classification of negative-strand RNA viruses .
- MB 103 A. Schematic representation of pathogenesis of rabies infection. B. Wildlife rabies in the United States.
- MB 104 Influenza virus. A. Electron micrograph. B. Schematic drawing showing envelope proteins-called H and N spikes-that protrude from the surface.
- MB 105 Time course of influenza A virus infection & Measles virus.

## Double-stranded RNA Viruses: The Reoviridae

- MB 106 Structure of Rotavirus. A. Electron micrograph. B. Schematic drawing.

## Unconventional Infectious Agents

- MB 107 Mechanism for multiplication of infections prior agents.

## Diseases

- MB 108 Characteristics of sexually transmitted diseases (STD): Bacterial pathogens.
- MB 109 Characteristics of sexually transmitted diseases: Fungi, Protozoa, and viruses.
- MB 110 Disease summary of some major organisms causing bacterial food poisoning.
- MB 111 Disease summary of urinary tract infections.
- MB 112 Characteristics of organisms causing bacterial meningitis.
- MB 113 Characteristics of hepatitis. [ ALT = alanine aminotransferase.]
- MB 114 Characteristics of community-acquired pneumonia.
- MB 115 Characteristics of atypical pneumonia.
- MB 116 Examples of bacteria and viruses that cause diseases of the eye.
- MB 117 Opportunistic infections of HIV - Bacteria & Fungi
- MB 118 Opportunistic infections of Viruses
- MB 119 Sinusitis (Bacterial) & otitis media

1954	J. F. ENDERS, WELLER, ROBBINS	Ability of poliomyelitis viruses to grow in cultures of various types of tissue. (Set of 3)
1952	SELMAN ABRAHAM WAKSMAN	Streptomycin, against tuberculosis.
1951	MAX THEILER	Yellow fever and how to combat it.
1945	FLEMING, BORIS CHAIN, H. FLOREY	Penicillin and its curative effect in various infectious diseases.
1930	KARL LANDSTEINER	Human blood groups.
1908	ILYA ILYICH METCHNIKOV	Work on immunity.
1908	PAUL EHRLICH	Work on immunity.
1907	CHARLES LOUIS ALPHONSE LAVERAN	Malarial parasite.
1905	ROBERT KOCH	Investigations in relation to tuberculosis.
1902	SIR RONALD ROSS	Life cycle of Plasmodium in mosquito.
1901	EMIL ADOLF VON BEHRING	Serum therapy, especially its application against diphtheria.

Size: 12"x18"

Laminated Mounted on Board

Microbiology

O.H.P.

Set of 60 Overhead Transparency in One Volume

These Microscopic Structures (1000X Magnification) were produced from original examinations & data furnished by bacteriological experts.

ZYGOMYCETES

1. ASEXUAL PHASE
2. SEXUAL PHASE
3. EXAMPLES

ASCOMYCETES

1. ASEXUAL PHASE
2. SEXUAL PHASE
3. EXAMPLES

BASIDIOMYCETES

1. POLYPORE FUNGI
2. GILL FUNGI
3. EXAMPLES

WATER BORNE PATHOGENS

1. ENTOMEBA HISTOLYTICA
2. GIARDIA LAMBLIA
3. CRYPTOSPORIDIUM PARVUM
4. SCHISTO SOMES
5. VIBRIO CHOLERAE
6. SALMONELLA TYPHI

7. SHIGELLA SPP.
8. CAMPYLOBACTER
9. LEGIONELLA SPP.
10. ESCHERICHIA COLI
11. HEPATITIS A+B
12. NORWALK & NORWALK LIKE VIRUS
13. ROTAVIRUSES

MICROBIAL FOOD POISONING

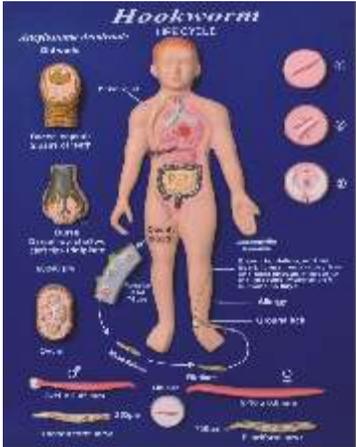

1. SALMONELLA SPP.
2. CAMPYLOBACTER JEJUNI
3. VIBRIO PARAHAEMOLYTICUS
5. STAPHYLOCOCCUS AUREUS
6. ESCHERICHIA COLI
7. CLOSTRIDIUM BOTULINUM
8. BACILLUS CEREUS
9. CLOSTRIDIUM PERFRINGENS
10. LISTERIA MONOCYTOGENES
11. NORWALK & LIKE VIRUS
12. ROTAVIRUSES

BACTERIA

1. SINGLE SPHERES
2. SPHERES IN PAIRS
3. SPHERES IN CHAINS
4. SPHERES IN CLUSTERS
5. SINGLE ROD
6. RODS WITH FLAGELLA
7. RODS WITH SPORES
8. RODS WITH CAPSULES
9. RODS IN CHAINS WITH SPORES
10. ACTIRIOMYCETES
11. CURVED RODS
12. SPIRALS
13. SPIRAL WITH FLAGELLA
14. SPIROCHETES

VIRUS-STRUCTURE

1. ADENOVIRUS
2. T.M.V
3. INFLUENZA
4. HIV
5. SMALL POX
6. BATERIOPHAGE P22
